

 **FABER**
AIR MATTERS

2019 COLLECTION

The pioneers of the
domestic cooker hood..

The performance shown in this catalogue is declared in accordance with the new Code of Conduct signed by the most qualified European manufacturers members of CECED (European Committee of Domestic Equipment Manufacturers), a strict code for transparency which establishes clear rules to measure air flow and noise level for hoods, common to all cooker hoods manufacturers:

- air capacity according to IEC/EN 61591 method
(with the hood fitted using a ducting pipe)
- noise level according to IEC/EN 60704-3 method (sound power)

IMPORTANT NOTICE

All Faber hoods should be fitted by a qualified technician.

Reliability is a constant characteristic of all FABER products.

You might not see it, but it permeates your kitchen immediately.

It becomes easier to appreciate with time, a certainty, a guarantee. When everything is working as it should, home is a more relaxing place. When the air is pure and clean, home becomes a place of true wellbeing. That's what reliability means to us: making life better for years to come.

RECORDS IN EXCELLENCE

- The first **ISO 9001** Quality Certification in the field of kitchen hoods.
- **SGS Certificate of Excellence no.001**: a worldwide first.
- Integrated Management System for Quality (**ISO 9001:2015**), Occupational Health and Safety (**OHSAS 18001**) and the Environment (**ISO 14001**) certified by SGS.
- Products conforming to the strictest safety requirements and to standards **EN 61591** and **EN 60704-3**, tested in an authorised in-house laboratory, certified and guaranteed by leading international bodies.

IMQ	The Italian Quality Mark
CE	The EU Safety Mark
SEMKO	International Safety Certification by Intertek ETL
UL	The Quality Mark for the USA and Canada
CCC	The Chinese Quality Mark

ENERGY LABEL FOR CLEARER SAVINGS.

Energy Efficiency Class: hoods with the highest ratings (A++, A+, A) consume less and are more respectful of the environment (green colour).

Annual Electricity

Consumption: calculated for standard hood functioning times (60 minutes of suction and 120 minutes of lighting a day).

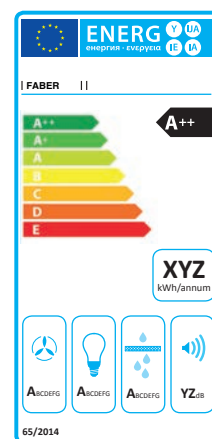

Fluid-dynamic efficiency:

reveals the quality and power of the hood: efficiency rises as suction power increases or energy consumption decreases.

Lighting efficiency: this indicates how much light the hood produces for the energy it consumes; for the same lighting power, more light-efficient hoods consume less.

Filter efficiency: indicates the filter's capacity to capture grease.

Noise level: measured in dB at the hood's maximum fan speed (not boost).

A vision of global reach.

HEADQUARTERS
Italy

A VISION OF GLOBAL REACH.

FABER has a lot in common with air... both are present all over the world.

Air has always been our chosen material. Now the world is our home. So it's only natural we should want to improve them both. Installing a kitchen hood is an easy way to improve the air in your home, of course, but only thanks to Faber. After all, we invented the kitchen hood, and we are making them better every day to provide our customers with the ultimate performance, quality and comfort. **Aspiring to a better world through leadership. Everywhere, every day.**

INVESTING IN THE WORLD

Always growing, to serve more people.

THINKING LONG TERM

All-round competence: automation, robotics, IT, total quality.

INNOVATING CONTINUOUSLY

Engineering research, advanced solutions, living benefits.

DESIGNING THE FUTURE

Ergonomics, design, functionality, comfort, style and wellbeing for the home.

Advanced technology for real life benefits.

BRUSHLESS

The brushless motor guarantees considerable energy saving coupled with high extraction efficacy. It is the most silent motor on the market and its performance remains stable in any usage condition.

ENERGY DIFFUSER

Energy Diffuser: it reduces noise up to 3dB(A) and higher hood efficiency by 30% even in the presence of long air outlet.

DOUBLE ASPIRATION

Double extraction is derived from the overlapping of two glasses in vertical hoods, ensuring greater hood effectiveness.

BOOST

FABER introduced Boost suction some time ago. Now we bring you Double Boost! This additional increase in power gives your hood a total of 5 suction speeds. Double Boost has the power to eliminate even the most persistent steam and odours in just a few minutes.

SPEED I

Intensive speed: function which activates maximum aspiration for 6 minutes to meet special cooking needs.

ANTI TOUCH

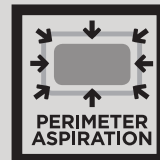

Anti-fingerprint steel
Special anti-fingerprint steel for a perfectly clean hood and a steel surface free of annoying marks.

DELAY 30

Delayed switch-off: allows automatic delayed switching off of the motor to complete elimination of residual odours.

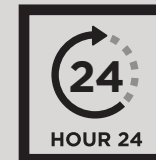

PERIMETER ASPIRATION

25% less* perceived noise. Perimeter suction exploits the Venturi effect to accelerate the air flow through a narrow gap. The air slows down again once inside the hood for more efficient extraction.

*Equivalent to a reduction of 3 dB(A) according to EN 60704-3.

HOUR 24

Key 24: function which allows the hood to be switched on for 24 hours a day for continuous air renewal with a level of noise that is imperceptible.

WATERPROOF

Any liquid spilled during cooking flows directly into a suction grille and is collected in an automatically drained tray under the hood, small enough to leave space for a utensil drawer.

REAR OUTLET

The rear air outlet available with many FABER hoods allows fumes to be channelled to the rear instead of upwards. This eliminates the need for an upper duct, freeing up useful space above the hood.

FILTER ALARM

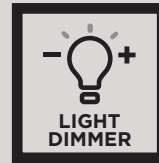

Filter saturation alarm: warns you when it is time to clean the anti-grease filter or substitute the anti-odour filter.

COMFORT LIGHT

Courtesy light: reduced hood light intensity with the simple press of a button. Thanks to its low level of energy consumption, the courtesy light can be left on for long periods of time.

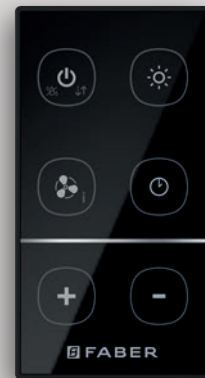

LIGHT DIMMER

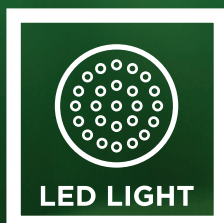

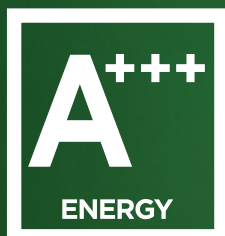

Dimmer light: adjusts hood courtesy light with the simple press of a button to meet all your kitchen needs.

NEW REMOTE CONTROL TECHNOLOGY. For a user-friendly kitchen.

With the new remote control design you can switch the hood on and off, adjust extraction power and light intensity and set the timer too. The remote control contains a magnet which lets you attach it to the hood when not needed, so that you always know where to find it.

GREEN INNOVATION. Imagine a future of pure, fresh air.

ENERGY EFFICIENCY CLASS A++, A+++

The energy efficiency class of a kitchen hood depends on the consumption of its fan motor, filter system and lighting. Needless to say, FABER hoods are in the highest efficiency classes. That means they deliver maximum performance for minimum consumption. Galileo, FABER's new hob extractor, exceeds all expectations and achieves the ultimate A+++ rating.

EVO BLOWER, THE EVOLUTION OF SILENCE.

All FABER hoods incorporate highly evolved blowers. This means exceptional performance in terms of efficiency, consumption, silence and effectiveness, even with long extraction ducts.

LED light FOR A BRIGHTER VIEW.

For the first time ever, all the hoods in the FABER 2018 collection incorporate LED lighting technology. Smart lighting for a naturally brighter future, LED units consume next to nothing and produce a pleasantly natural light that ensures perfect visibility without altering colours.

UP & DOWN TECHNOLOGY.

UP & DOWN: MOBILE LIGHT FOR YOUR KITCHEN.

The beauty of F-LIGHT hoods is that they don't just hang there. While raising the tone of any kitchen, their real ambition is to descend and be seen, to provide the light needed for perfect visibility. DOWN: the hood descends to illuminate the hob and ensure maximum extraction efficiency. UP: the hood returns to the ceiling to form an elegant light fitting. And FABER's brand-new remote control makes movement easy.

EXCLUSIVE TECHNOLOGY

F-LIGHT: MOVING IN CLASS A.

A ENERGY EFFICIENCY

All F-LIGHT models move silently, and this is clear proof of their quality, but there's more. Their energy efficiency places them in a class of their own while bringing comfort to your kitchen.

LED RING

FABER's new F-LIGHT hoods also feature a glass panel with a unique ring of light provided by a circular LED. This bright idea provides pleasant, effective illumination, improves the look of your hob and ensures visibility over the cooking area.

AIRLANE TECHNOLOGY.

Superb extraction through an invisible duct.

ANOTHER STEP FORWARD FROM FABER'S F-LIGHT HOODS.

The Plus versions (with UP&DOWN) of FABER's latest F-LIGHT hoods can now do without a conventional duct even in ducted mode: the duct is completely invisible thanks to AIRLANE TECHNOLOGY that guarantees purer air and better performance in energy class A.

AIRLANE
TECHNOLOGY

PURE POWER MAKES NO NOISE. IT WORKS IN SECRET.

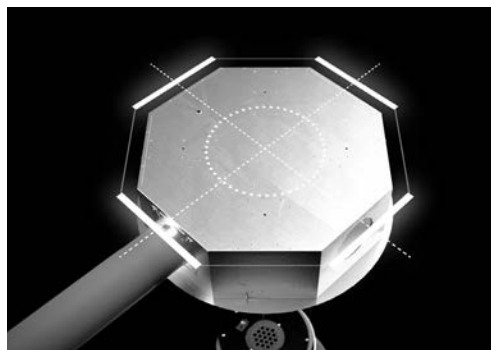

With AIRLANE TECHNOLOGY, a second fan in the false ceiling switches on automatically along with the hood. As soon as fumes and steam emerge from the hood's top grill, they enter a rising vortex that is immediately captured and extracted by the overhead fan through a grill directly above that of the hood. The ascending vortex also draws in fumes from further away, purifying the air throughout the kitchen and delivering unrivalled comfort.

REAL POWER MAKES NO NOISE. IT KEEPS THE SECRET.

A second fan unit is hidden in just 30 cm of false ceiling thanks to the AIRLANE kit. At the time of installation, this can be connected to an outdoor air outlet in any of four different positions. The duct between the two remains completely invisible inside the home.

A second fan unit is hidden in just 30 cm of false ceiling

Country Grey Matt

Warm White / Country Grey Matt

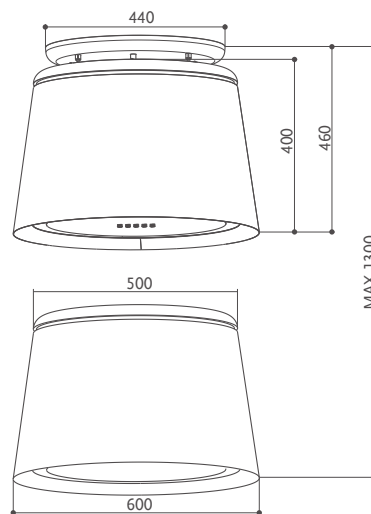

THE CONICAL HOOD. A MODERN CLASSIC.

A thin line of Stainless steel embellishes the top part of this original, conical hood, which is also available with a bottom section in a different finish.

The contemporary, essential design of Céline is made even more striking by Up& Down technology. The hood can be raised to the ceiling when not in use and lowered again whenever its extraordinary performance is needed. Céline comes in a choice of matt country grey and warm white.

The hood can also be operated by using the controls on a Faber hob

GALILEO

SIMPLY GENIUS

The Galileo hood, named after a true Italian genius, is a jewel of technology in energy efficiency class A+++, and the top of Faber's induction range. Invisible but extremely functional, Galileo is a perfect combination of hood and hob in a single, worktop-height package.

The hood and hob form a superbly efficient duo, characterised by attention to detail and amazing performance. Touch slider controls are complemented by maximum power, total safety and silence.

Double boost and 5 suction speeds.

CAST IRON GRID FLUSH FIT

Galileo stands out for its waterproof motor technology, which guarantees normal functioning and complete safety even if large quantities of liquid are spilled on the hob.

The motor's compact design also means that Galileo is the only product in its class that leaves enough free space inside the cabinet for a utensil drawer to be fitted immediately beneath.

GALILEO

AUTOMATIC FUNCTION
 The hood will turn on at the most suitable speed automatically, adapting the extraction capacity to the maximum cooking level. To deactivate this function simply press the key A, later it can be started up again by pressing the same control and the LED "A" will light up.

BRAND NEW

The product is also equipped for installation in 60 cm deep worktops.

above the hob.**

Glam-Fit Black Glass

Glam-Fit White glass

550 mm

550 mm

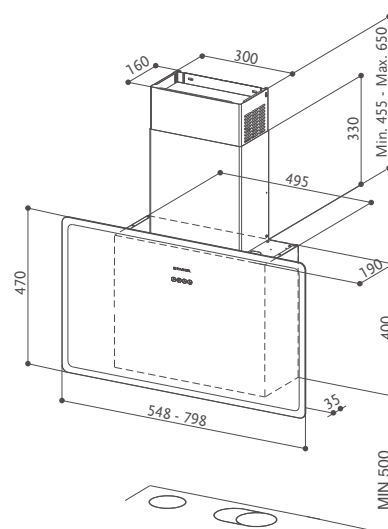

A VERTICAL HOOD WITH THE LATEST NAUTILUS TECHNOLOGY.

Glamorous by name and nature, the Glam-Fit hood is characterised by a minimal, contemporary style that radiates elegance in every detail.

Its clean, essential lines, complemented by a glass surface and an elegant clear surround, add refinement to any kitchen and conceal Faber's exclusive Nautilus technology.

The first ever completely flat, vertical glass hood, Glam-Fit also features an ultra-thin body of only 15 cm. Impressive performance and economic consumption place it in energy efficiency class A.

Glam-Fit comes in two finishes, black and white, both equally striking and typically Faber. Glam-Fit is also available in a "small" 55 cm version.

To be installed at a minimum distance from the hob of **50 cm**.

ARIES TECHNOLOGY.

The natural shape of power and efficiency.

FABER'S NEW VERTICAL HOODS FEATURE AN AMAZING FLAT DESIGN.

Now Faber's VERTICAL hoods are becoming even more special, with a thickness of only 15 cm that gives them an ultra-thin, ultra-flat and even more modern look. It's the merit of Faber's new ARIES technology, which concentrates maximum extraction power and energy efficiency into a minimum of space.

UNRIVALLED ENERGY EFFICIENCY: CLASS A+.

ARIES technology harnesses the power of 2 brushless motors to achieve extraction of over 700 m³/h. It's quieter too, producing 9 dB(A) less noise than an equivalent single motor system. ARIES' superior performance in energy saving and silence earns a class A+ energy efficiency rating for Faber's VERTICAL hoods.

ENERGY SHAPED BY NATURE.

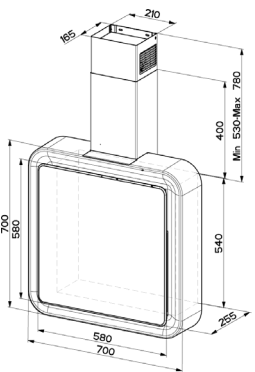

ARIES technology takes its name from the shape of the motor which looks a bit like the head of a ram. Power inspired by nature, greater respect for the environment and better, more effective extraction.

**BRAND
NEW**

**Designed by the renowned
Carlo Colombo; a piece of
art in your kitchen.**

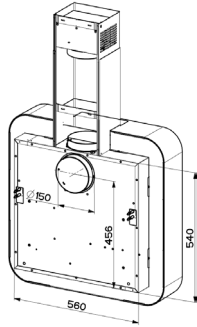

The Pyana hood is the result of continuing collaboration between Faber and the internationally famous designer Carlo Colombo. Pyana features a precious, glossfinish body with gently rounded corners and an internal glass panel with an exclusive opening system. Customers can choose between two advanced motor technologies: Nautilus or the new Aries, both guaranteed to deliver superb efficiency with minimum consumption.

**Black Gloss /
Black Glass**

The hood can also be operated by using the controls on a Faber hob

**White/
White glass**

PYANA

NEW NAUTILUS TECHNOLOGY. Perfect, silent nature.

NAUTILUS
TECHNOLOGY

MORE POWER WITH LESS NOISE.

The NEW NAUTILUS blower is the latest evolution in FABER technology for ultra-thin vertical hoods. NEW NAUTILUS boosts extraction power by 30 m³/h, and reduces noise too. That means greater efficiency, with the same economic consumption as before.

MAXIMUM COMFORT AND ENERGY CLASS A.

NEW NAUTILUS occupies only 15 cm of space but guarantees maximum hood efficiency for amazing comfort in the kitchen. Silently!

NATURE IMPROVED BY TECHNOLOGY.

The basic design of NEW NAUTILUS is still inspired by the cross section of the nautilus shell, but now FABER has optimised the rotor thanks to advanced research into fluid dynamics and improved comfort and performance through other innovations.

IMPROVING ON PERFECTION.

Faber's famous vertical hood is re-inventing its role as "window over the hob" by adopting the latest Nautilus technology. The new Nautilus motor not only improves performance but makes Talika an even more desirable addition to your kitchen by reducing noise yet again. Unprecedented comfort from a lightweight, ultra-thin hood now available in new finishes.

Award winning hood featuring the very latest in motor technology and designer finishes.

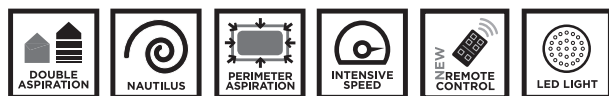

To be installed at a minimum distance from the hob of **50 cm**.

INTEGRATED HOODS

Discreet, rational, silent.
Built-in hoods reduce the aesthetic
impact of the hood in the kitchen
and integrate perfectly with the
cupboards. An essential tool that's
invisible to the eye.

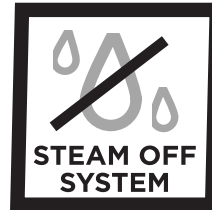

STEAM OFF SYSTEM TECHNOLOGY.

Total wellbeing. Zero condensation.

**STEAM OFF
TECHNOLOGY**

DUAL-ACTION AIR FLOW. GOODBYE CONDENSATION!

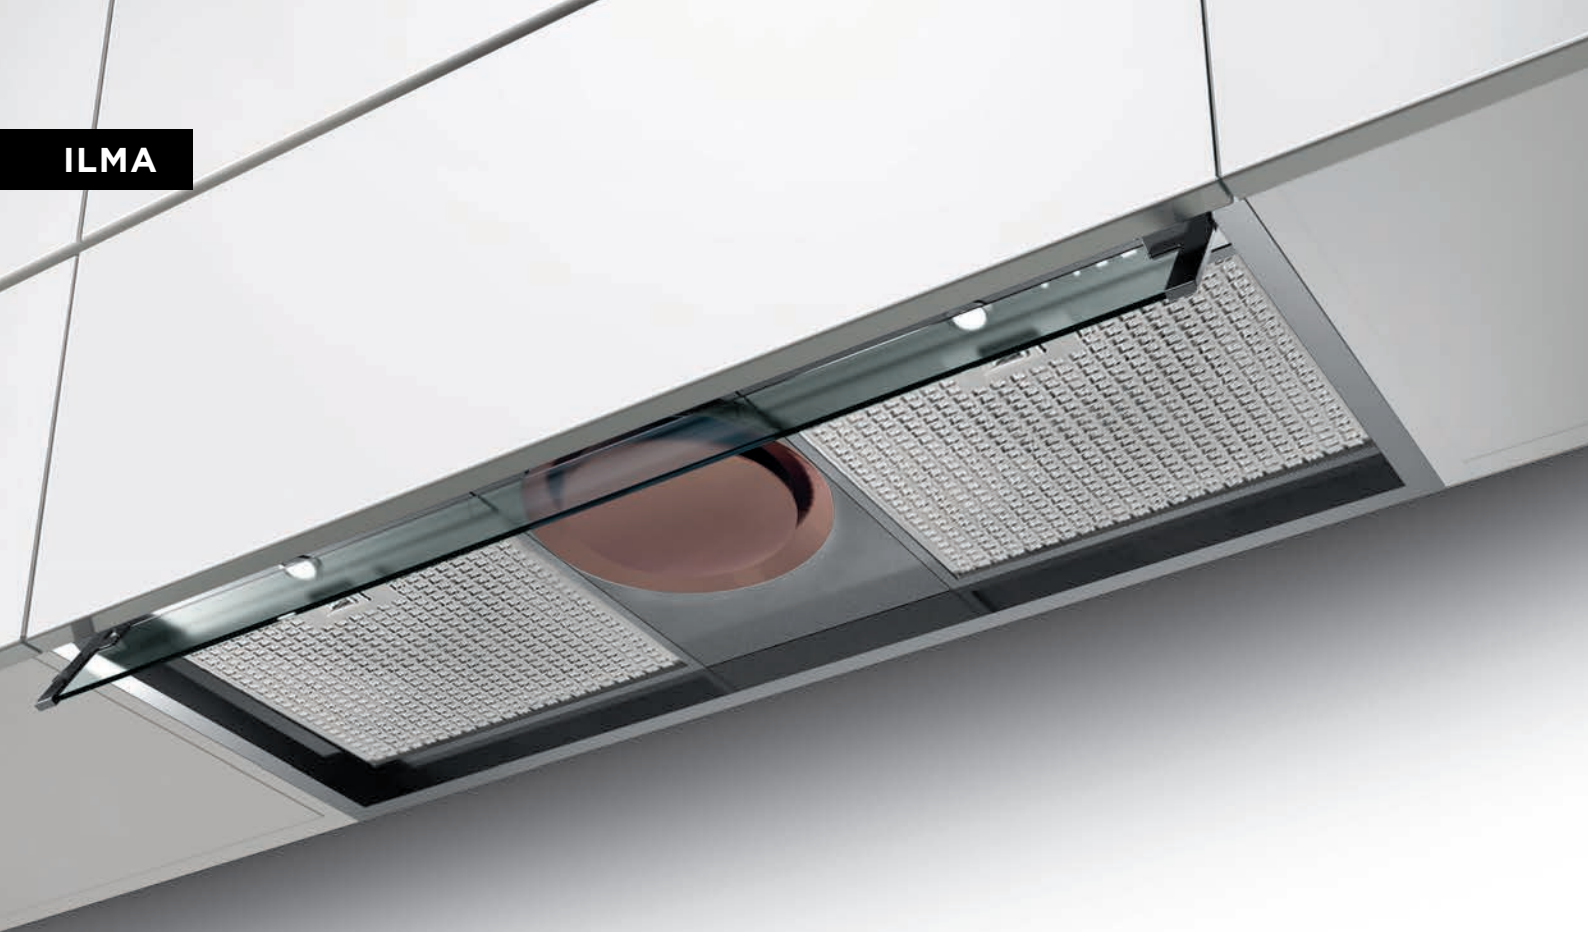

In parallel with normal extraction, SOS hoods inject carefully controlled helical and variable-geometry jets of air into the air flow. This creates a vortex that accelerates the air stream upwards, optimising the suction effect and capturing all cooking fumes and steam. The result? Goodbye condensation!

CONDENSATION-FREE INDUCTION HOODS. ANOTHER FABER EXCLUSIVE.

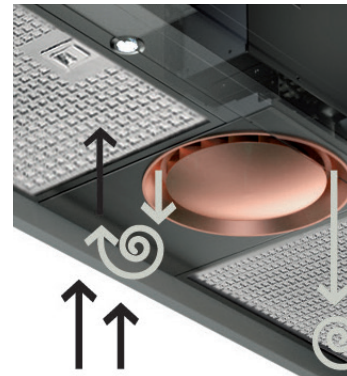

When you cook on an induction hob, you create a temperature differential between the hot air at the hob and the colder air under the hood. This disperses the steam, causing droplets of condensation to form all around the kitchen. FABER's exclusive SOS technology solves this problem once and for all.

ILMA

600 mm

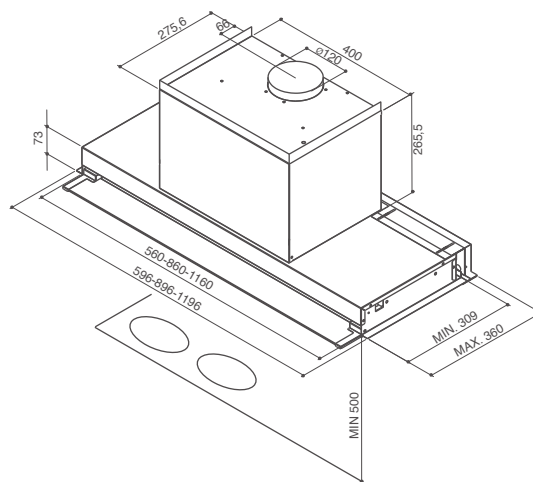

Designed specifically to eliminate the build-up of condensation on cabinets.

EXCLUSIVE, CONDENSATION-FREE COMFORT

With Steam Off System, the exclusive Faber technology, the hood not only sucks in but also emits air jets that create a vortical motion and acceleration and help to convey and capture the steam. This puts an end to condensation and its depositing under and around the hood!

DOUBLE AIR ACTION TO COMPLETELY ELIMINATE CONDENSATION.

The hood can also be operated by using the controls on a Faber hob

To be installed at a minimum distance from the hob of **50 cm**.

HOBS

NEW CONNECTION TECHNOLOGY.

New connections between technology and style.

FABER HOBS ADD THAT FINISHING TOUCH TO YOUR KITCHEN

With hood controls integrated in the hob, the gestures of cooking and kitchen life become so much easier. Only FABER can make improvements with such contemporary style.

NEW COLLECTION, NEW CONNECTION

FABER has just added another three different-size models already able to integrate with 2018 Collection hoods.
 FCH63: a square hob with 2 small induction zones rings and a large hotplate.
 FCH84: a large, rectangular hob with 4 different cooking areas.
 FCH83: an elongated hob with 3 hotplates in line.

PERFECT HARMONY WITH A TOUCH OF GLAMOUR

FABER's three new induction hobs boast original, exclusive graphics with eye-catching, curved lines to give your kitchen a glamorous, contemporary look. When combined with the splendid F-light and Vertical hoods, newly designed for 2018, their elegant Graphite Grey finishes create exquisite matches in colour and style.

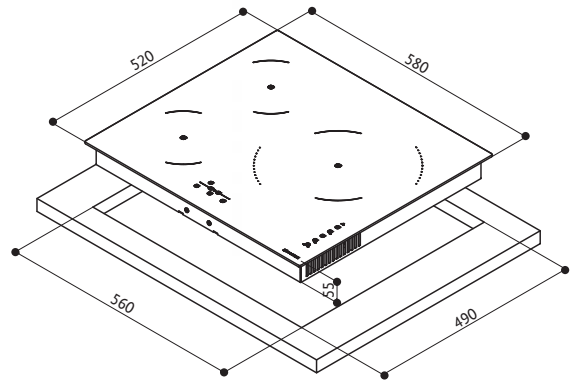

FABER CONNECTION: models equipped by connection technology with Faber induction hobs

EXTERNAL MOTOR HOODS

EXTERNAL MOTOR INSTALLATION For truly silent extraction.

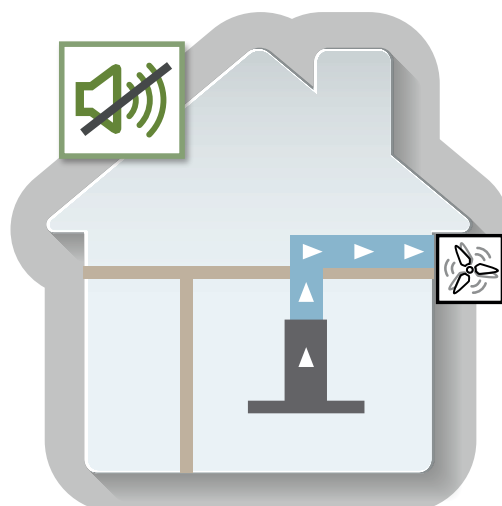

SILENCE INDOORS MEANS KEEPING THE NOISE OUTSIDE.

If your home has an extractor hood in the kitchen, living zone or any other indoor space, motor noise can now be completely eliminated. FABER's range of dedicated motorless hoods can be connected to an external motor installed outside the house. That means total silence throughout the living space indoors. Interior designers and hi-fi enthusiasts will be delighted with their new-found freedom to create dream environments.

External motor

A SMALL MOTOR THAT'S BIG IN COMFORT.

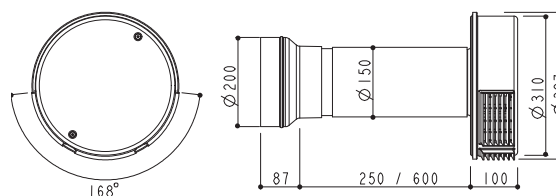

The external motor's compact dimensions and light weight (only 7 kg) make installation easy and allow the unit to be located in the ideal position outside the home. All that remains indoors is the stylish, elegant hood and, of course, all the benefits that come with it: the joy of living in perfect silence and the beauty of breathing pure air. Don't forget that external motors also solve so many problems of space and make hood installation possible in even the tightest spaces.

REMOTE MOTOR KIT

The silent pleasure of a remote motor.

THE JOY OF SILENT EXTRACTION WITH MORE FLEXIBLE KITCHEN DESIGN.

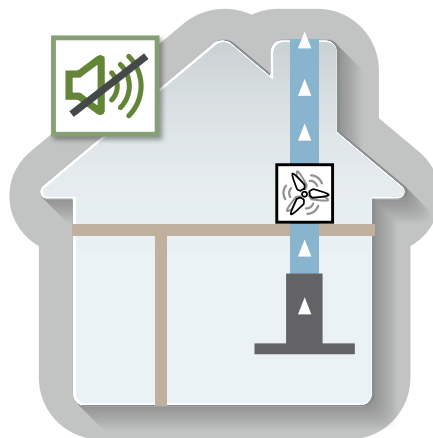

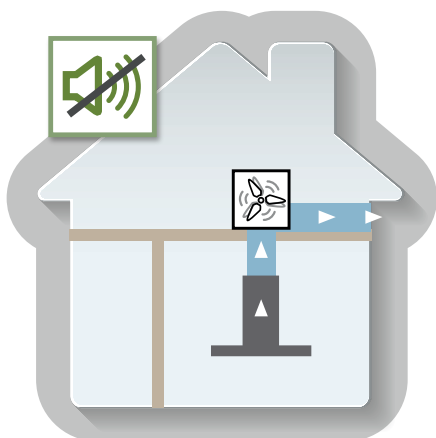

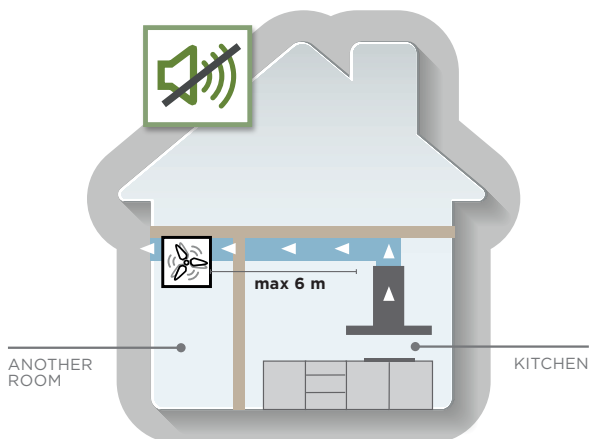

With a FABER hood, noise can be virtually eliminated by moving away its source - the motor and fan. FABER's Remote Motor Kit allows the motor to be removed from the hood and installed in another room, leaving your kitchen amazingly silent. And there's no risk of annoying your neighbours! Only Faber offers you the freedom to furnish your kitchen as you want and to enjoy the ultimate comfort, in line with the latest trends in urban green living.

THE SMART WAY TO TRANSFORM YOUR HOOD.

FABER's Remote Motor Kit lets you change the configuration of your hood by moving the motor away from the cooking area. A simple, practical and smart solution! The motor can be relocated with no installation or connection problems. The result? Less noise and greater comfort in the kitchen.

SIX METRES OF SILENCE.

FABER's Remote Motor Kit lets you move the hood's motor to another room, up to a maximum distance of 6 metres. Minimum noise and maximum comfort are guaranteed, not just in the kitchen but throughout the living area.

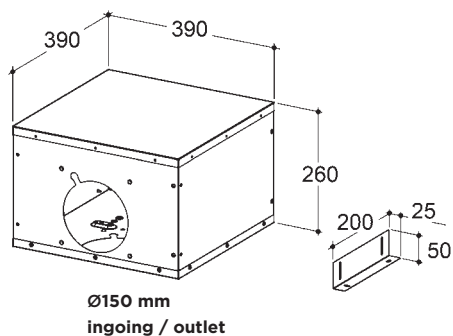

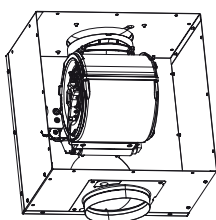

FLEXIBILITY MEANS FINDING THE RIGHT POSITION.

Thanks to its versatile design, the Remote Motor Kit can be installed in or moved to any of the positions illustrated here, so you can always find the best possible position for reducing noise.

CHOOSING THE RIGHT HOOD

The necessary extraction capacity is determined by the volume of the kitchen. An effective hood changes the air of the kitchen 10 times per hour. A powerful motor is quieter and uses less energy because it is effective at low speeds.

-A hood does not create noise disturbance if its capacity is sufficient without exceeding 55 dB(A) of sound power.

-A powerful motor can be efficient even at lower, quieter speeds.

¹ Fan Handbook - F. Bleier 1998

$$\text{EFFECTIVENESS} = \text{kitchen m}^2 \times \text{kitchen height} \times \text{10 changes of air}$$

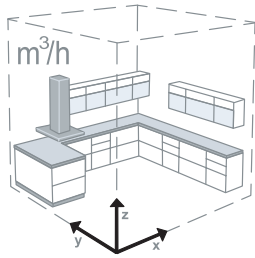

Example: A 15 m² kitchen which is 3 m tall requires a hood which aspirates at least 450 m³/h. Infact: 15 m² x 3 m x 10 = 450 m³/h
Now consult the performance table found in the product catalogue.

The hood is efficient if an equal or higher capacity value is found in one of the speed columns.

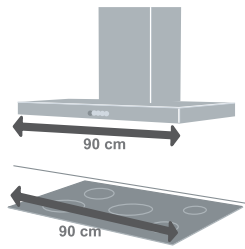

Speed	1	2	3	4	INT
Air capacity IEC point	110	195	260	313	430
Pressure	-	-	-	-	-
Input	30	45	55	70	100
Noise level	48	53	58	62	69

INSTALLATION

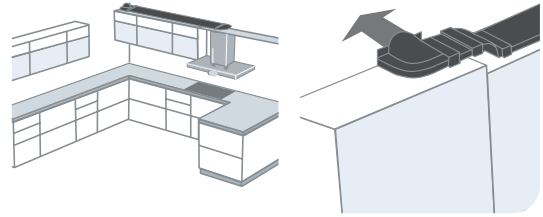

Proper installation begins with an inspection. When choosing a hood, you should know:

Kitchen volume (which determines the necessary aspiration capacity). See section "Choosing the right hood."

Length of the cooking top (the hood is generally as long as the cooking top area).

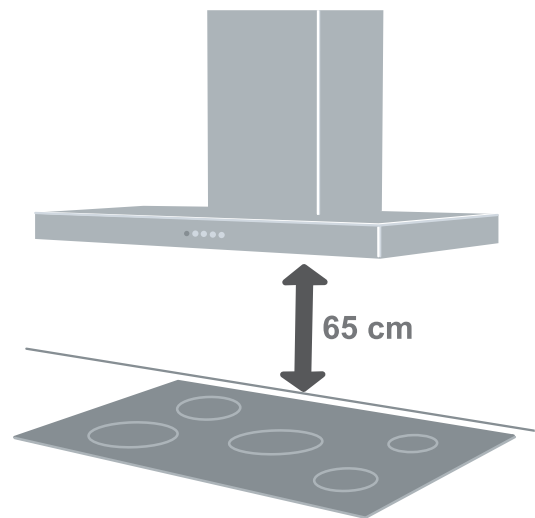

The position and distance of the exit hole (very long and very curved right-angled tubes limit hood efficiency).

Installation distance

The hood is to be installed at a minimum distance of 65 cm from the cooking top, except for particular models where is specified in the technical drawing and instructions manual.

ATTENTION: the product guarantee will not be considered valid if this distance is not respected. The hood may not reach declared performance levels if the distance from the cooking top exceeds 75 cm. Some vertical-installation models (ex. Jolie) are to be installed lower. Check the product's technical manual.

Inspection

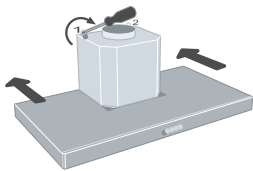

- 1 - Turn on the motor
 - 2 - Switch on the lights
- If the hood is an extraction hood, verify that it is properly connected to the exit tubing.
If the hood is a filtering hood, verify that the Charcoal filters have been inserted.

First cleaning

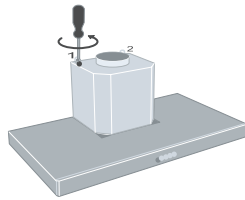

- Remove the protective films
- Remove impurities with a damp sponge and a small amount of neutral soap
- Rinse with a damp cloth
- Dry with a soft cloth. If the hood is in Stainless steel, continue with a steel glaze
- You can give Stainless steel hoods a protective treatment with the Faber Clin&Clin tissue

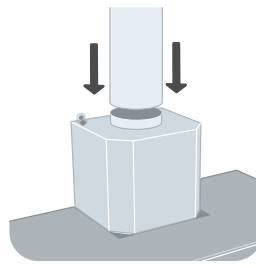

Faber hoods are easy to install because they have EASY CUBE:

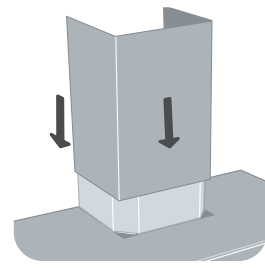

Hang the hood

Align

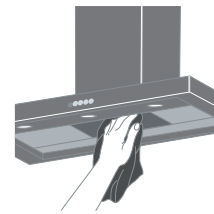

Connect tubing

Insert the chimney

USE AND MAINTENANCE

Switch on the hood a minute before cooking begins to create air flow that channels fumes and steam toward the aspiration surfaces.
If necessary, leave the hood switched on even after cooking is finished so that all steam and odours can be properly aspirated.

- Wash the metal anti-grease filters by hand or in the dishwasher every two months¹
 - Replace synthetic anti-grease filters every two months
 - Regular filter maintenance guarantees efficient hood use
- ATTENTION:** grease deposited on the filters is inflammable: be sure to perform regular maintenance
- ¹ These intervals of time refer to a regular use of the hood, approximately 3 hours per day

HOOD CLEANING

- Remove impurities with a damp sponge and a small amount of neutral soap²
 - Rinse with a damp cloth
 - Dry with a soft cloth, if the hood is in Stainless steel, follow the steel brushing
 - Clean the internal hood conduit once a year
- ² Acid-based cleaning products can damage hood surfaces

ANTI-ODOURS FILTERS

Long lasting

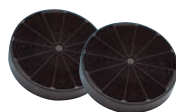

3
YEARS
MAX

Faber has developed a new, re-usable active carbon filter. Thanks to the multi-layer technology, the Long Lasting filter further increases filtration efficiency, with the double layer using an initial pre-filtration to capture the largest particles, and a second, more concentrated filtration to guarantee optimal air cleanliness. The filter can be washed in the dishwasher every 3-4 months¹, for a maximum of 3 years and dries at room temperature in a vertical position to allow the water to drain out. Alternatively, it can be placed in an oven at 50°C.

¹ Normal use cooker hood, by around 3 hours per day

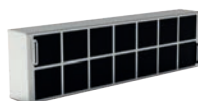

High performance

6
MONTHS
MAX

High-efficiency filter with a highly-concentrated carbon micro-granular structure that can guarantee more than 80% filtration capacity of intake fumes and a duration of up to 6 months, double that of a normal Charcoal filter, making for economic savings of more than 20%.

CERAMIC FILTER

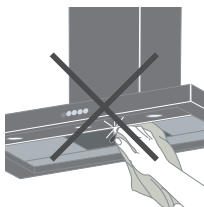

Innovative Charcoal filter that can be regenerated in the oven at 200° every 2-3 months and allows to reach high absorption efficiency.

QUALITY AND SAFETY

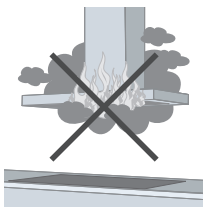

Faber hoods benefit from 60 years of competence in the treatment of kitchen air

- We were the first in the kitchen hood sector to obtain an ISO 9001 company quality system certificate.
- System integrated with Quality, Safety and Environment certified by SGS respecting the ISO 9001:2000, OHSAS 18001 and ISO 14001 norms.
- We have received the SGS Excellence Certificate, the absolute first in the world, number 001.
- All Faber hoods conform to European safety standards (EC mark of conformity), and have also been certified by the IMQ, a reliable, independent organisation further guaranteeing clients on quality (IMQ mark of security).

FABER HOODS ARE DESIGNED FOR SAFETY

Hammered internal edges and tempered glass to avoid risks of cutting.

Thermo-protected motors and self-extinguishing plastics help avoid any risk of fire. Electronics are solid state, cables and connections are all placed correctly to avoid electric shock or dangerous sparks.

All Faber hoods have undergone safety and performance tests.

Aspiration and noise capacity have been measured according to standard norms:

- EN 61591
- EN 60704-3

unique specifications for surveying kitchen hood performance.

ATTENTION: Comparisons between different brand hoods should be carried out on complete data obtained according to these standards.

The Faber laboratory is NEMKO and IMQ certified.

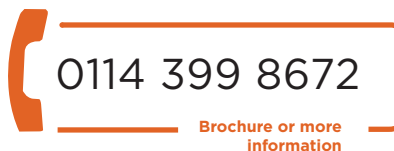

NEED HELP?

Kitchenex are Faber's sole approved supplier for the UK. If you would like any further information, please call us on landline number.

kitchenEx[®]

All Faber products are sold with a 2-year guarantee, covering parts and labour. Defects caused by incorrect installation are not covered by the warranty.
